Transite Develops Module to Enable Rapid Migration of Data For Companies Switching Transportation Management Systems

Integration and migration are two primary obstacles in achieving smooth conversions

RALEIGH, NC—April 4, 2011— Transite Technology, a leading provider of transportation management software and services, has developed an industry-first module that enables companies to seamlessly migrate data from their current transportation management system to Transite's new JaguarTMS.

"Typically, we are now replacing a number of existing transportation management systems such as MercuryGate and IGL with modern, business-flexible technology," said Geoff Comrie, CEO of Transite. "One consistent challenge is quickly enabling the customer to use the data that has been collected and utilized in the old system."

The new module was created specifically to provide Transite's normal rapid implementation schedules while increasing reliability of the integration across the customer's associated supply chain software and overall ERP system.

"We believe we are the first company to develop a module specifically designed for migration purposes," said Comrie. "Our new Jaguar technology is doing very well and we wanted to build a technology that offers the customer our typical quick up-time and the fastest time to ROI."

About Transite

Since 2002, Transite's solutions, technologies and services have enabled America's best run 3PLs, brokers, shippers and carriers to streamline processes and increase profits. Transite allows these parties to automate and manage LTL, TL, small package, ocean, and air shipments. The company's products range from complete solutions to technologies used by other TMS and ERP vendors to provide best-of-breed functionality. Transite's solutions are hosted or purchased, flexible, quick to implement, and cost-effective. www.transite.com
